- B. OPPORTUNITY TO CURE In the event that Vendor fails to perform a contractual requirement or materially breaches any term or condition, the County may issue a written cure notice. The Vendor may have a period of time in which to cure. The County is not required to allow the Vendor to cure defects if the opportunity for cure is not feasible as, determined solely within the discretion of the County. Time allowed for cure shall not diminish or eliminate Vendor's liability for damages, or otherwise affect any other remedies available against Vendor under the Agreement or by law. If corrective action is deemed acceptable by the County, the Procurement Management Director shall notify the Vendor in writing of the need to take corrective action and the date in which the corrective action must be completed. If corrective action is not completed as specified by the Procurement Management Director, or if such corrective action is deemed by the County to be insufficient, the Agreement may be terminated. The County reserves the right to withhold further payments, or prohibit the Vendor from incurring additional obligations of funds during investigation of the alleged breach and pending corrective action by the Vendor or a decision by the County to terminate the Agreement. In the event of termination, the County shall have the right to procure any replacement materials, supplies, services and/or equipment that are the subject of this Agreement on the open market. In addition, the Vendor shall be liable for damages as authorized by law including, but not limited to, any price difference between the original Agreement and the replacement or cover contract and all administrative costs directly related to the replacement contract, e.g., cost of the competitive bidding, mailing, advertising and staff time. If it is determined that: (1) the Vendor was not in material breach; or (2) failure to perform was outside of Vendor's or its subcontractor's control, fault or negligence, the termination shall be deemed to be a "Termination for Convenience." The rights and remedies of the County provided in this Agreement are not exclusive and are in addition to any other rights and remedies provided by law.

- D. TERMINATION FOR CONVENIENCE Except as otherwise provided in this Agreement, the County, at the sole discretion of the Procurement Management Director, may terminate this Agreement, in whole or in part by giving thirty (30) calendar days written notice beginning on the second day after mailing to the Vendor. If this Agreement is so terminated, the County shall be liable only for payment required under this Agreement for properly authorized services rendered, or materials, supplies and/or equipment delivered to and accepted by the County prior to the effective date of Agreement termination. The County shall have no other obligation whatsoever to the Vendor for such termination.

- F. Neither the County's review, approval or acceptance of, nor payment for, the products and services required under this Agreement shall be construed to operate as a waiver of any rights under this Agreement or of any cause of action arising out of the performance of this Agreement.

 - 2.4.4.1. Category 1 Water Water originating from a source that does not pose substantial harm to humans. Category 1 water is also referred to as "clean water". Examples of clean water sources may include, but are not limited to:
 - Broken domestic supply lines
 - Tub or sink overflows with no contaminants
 - Appliance malfunctions involving domestic water supply lines
 - Melting ice
 - Falling rainwater
 - Broken toilet tanks and toilet bowls that do not contain contaminants or additives
 - Clean water that has contact with structural surfaces and content materials may deteriorate in cleanliness as it dissolves or mixes with soils and other contaminants, and as time elapses
 - 2.4.4.2. Category 2 Water Water containing a significant degree of chemical, biological, and/or physical contamination and having the potential to cause discomfort or sickness if consumed by or exposed by humans. Category 2 water is also referred to as "gray water". Gray water carries microorganisms and nutrients for microorganisms. Examples of gray water sources may include, but are not limited to:
 - Discharge from dishwashers or washing machines
 - Overflow from toilet bowls with some urine (no feces)

- Sump pump failures
- Seepage due to hydrostatic pressure
- Chilled and condensate water

- Gray water may contain chemicals, bio-contaminants such as fungal, bacterial and viral algae, and other forms of contamination including physical hazards. Time and temperature aggravate category 2 water contamination levels significantly. Gray water in flooded structures that remains untreated for longer than forty-eight (48) hours may change to category 3- black water.
- 2.4.4.3. Category 3 Water Grossly unsanitary water containing pathogenic agents, arising from sewage or other contaminated water sources and having likelihood of causing discomfort or sickness if consumed or exposed to humans. Black water includes sewage and other contaminated water sources entering or affecting the indoor environment. Toilet backflow that originated beyond trap are considered black water contamination, regardless of visible content or color. Category 3 water includes, but is not limited to:
 - Sewage/rainwater mixed

- Rising water from rivers or streams, such water sources carry silt and organic matter into structures creating black water conditions
- 2.4.5. Water Damage Clean up and mold prevention: The table below presents strategies to respond to water damage within 24-48 hours. These guidelines help avoid the need for remediation of mold growth by taking quick action before growth starts. Depending on the size of the area involved and resources available, the County may need professional assistance to dry an area quickly and thoroughly.

2.5. Restoration/Remediation Criteria

- 2.5.1. Excess Water Removal Excess water removal is essential as the beginning point of restoration procedures. Removal of excess water may be achieved by physical means, such as mopping or soaking up excess moisture from hard surfaces or furnishings. However, water removal usually involves the use of more sophisticated techniques and equipment such as pumps, or specifically designed commercial wet vacuuming equipment.
- 2.5.2. Evaporation Once excess water is removed, remaining water must be changed from a liquid to a vapor by promoting evaporation. Normally, this is accomplished efficiently with specialized air-moving equipment.
- 2.5.3. Dehumidification Once moisture is evaporated from structural materials and contents into the air, the moisture must be removed from the air through dehumidification, or it must be externally exhausted. Failure to dehumidify may result in substantial secondary damage and present a significant health hazard.
- 2.5.4. Temperature Control Both evaporation and dehumidification are greatly enhanced by controlling the temperature in a confined environment. Additionally, microorganisms' growth is temperature related. Thus, temperature modification and control is an important basis principle for safe and effective drying.
- 2.5.5. Monitoring The damaged structure must be monitored starting with the initial assessment and evaluation, and continuing throughout the restoration process. Monitoring procedures may include, but are not limited to the following:
 - 2.5.5.1. Temperature and humidity readings
 - 2.5.5.2. Updating drying progress status
 - 2.5.5.3. Checking the moisture content of structural wood and other materials with a moisture meter
- 2.5.6. Inspection Following the removal of excess water, a detailed inspection must be conducted that considers the extent of water migration, the types of quantities of affected material and the degree of apparent damage. The information obtained may be used to analyze the extent of damage and to determine the job scope. Professional testing equipment and principals of psychometry must be used to formulate a plan to dry and restore, or replace both structural materials and contents. A comprehensive inspection may include, but not necessarily be limited to:
 - 2.5.6.1. Identifying and evaluating health and safety hazards
 - 2.5.6.2. Determining the source of water

³⁸ B250003CMR- Disaster Environmental Remediation

- 2.5.6.3. Determining the need to protect floor covering materials and contents
- 2.5.6.4. Determining the extent of moisture intrusion
- 2.5.6.5. Determining the job scope

- 2.5.6.7. Evaluating inventories and/or contents items
- 2.5.6.8. Evaluating the HVAC system if affected
- 2.5.6.9. Assess other structural materials (walls, ceilings, etc.)
- 2.5.6.10. Documenting preexisting conditions not related to the current loss (wear, urine contamination, delamination, etc.)
- 2.5.6.11. Establishing drying goals
- 2.5.7. Floor covering evaluation Vendor shall decide as to whether floor covering materials (e.g. carpet, cushion, vinyl, wood, laminates) are salvageable. Determination may include, but not limited to:
 - 2.5.7.1. Construction integrity
 - 2.5.7.2. Porosity and potential health effects from contaminants
 - 2.5.7.3. Disposition of floor coverings and the ability to salvage them will be determined to the appended Drying Standards
- 2.5.8. Structural Materials –Throughout the restoration process, Vendor shall direct effort toward anticipating secondary damage and attending to other structural components that may require drying, or demolition and replacement. This is especially important if water remains in contact with building materials longer than 24-hours, such as water on flooring in contact with gypsum board. These components may include, but are not limited to:
 - 2.5.8.1. Ceilings
 - 2.5.8.2. Walls
 - 2.5.8.3. Built-in furnishings and fixtures
 - 2.5.8.4. Insulation
 - 2.5.8.5. Structural Wood
- 2.5.9. Occupant Evacuation For areas with extensive water damage, Vendor shall determine if occupants need to be evacuated from the damaged area, and if so, estimate the duration of time. Factors used to make this determination may include, but are not limited to:
 - 2.5.9.1. Type of contamination (e.g., Categories 1, 2 or 3 Water)
 - 2.5.9.2. Obvious indications of high levels of microbiological or chemical contamination
 - 2.5.9.3. Presence of occupants who are immunocompromised or have mold allergies, asthma or other applicable medical conditions.
- 2.5.10. Technician Training Technicians performing Category 2 water (gray water) and category 3 water (black water) damage restoration must be trained in risks of exposure and procedure for sale cleanup of these materials.
- 2.5.11. Personal Protection Persons working in or around Category 3 water during stage of decontamination, cleaning and biocide application must be equipped with Personal Protective Equipment (PPE) including but not limited to:
 - 2.5.11.1. Rubber gloves 2.5.11.2. Eye protection 2.5.11.3. Protective suit
 - 2.5.11.4. Rubber boots
 - 2.5.11. 1.1(4000) 000

An Evaluation must be made to determine the necessity for respiratory protection. In the case of overhead hazards or contamination, hard hats must also be worn.

2.6. Criteria for Determining when Building Materials are Dry

- 2.6.1. The ambient conditions must be stabilized and be able to be held at normal room conditions.
- 2.6.2. The building materials must be returned to their equilibrium moisture content to prevent the active growth of fungal organisms.
- 2.6.3. The building materials must be returned to their pre-loss moisture state.

2. QUESTIONS/ANSWERS

1.	Section 7.1 of the Solicitation states that the Vendor is required to have a License as mold remediation contractor under F.S. 489. F.S. 489 is the chapter governing Construction Contracting. Chapter 468 of the Florida Statutes governs Mold Related Services and specifically exempts those contractors licensed under F.S. 489 from obtaining a separate license. See F.S. 468.841(1)(d) and (2)(d). Please confirm that a company that is licensed as a General Contractor under Florida Statutes 489 meets the licensein explanation of the bid
Answer	licensing requirements for this bid. A General Contractor License is not required for this solicitation. Please see revised Special Conditions, Section 7, Article 7.1 above revising the requirement to reflect a mold remediation license.
2.	I noticed there was no mention of mold assessment or Industrial Hygiene, is that a separate bid? Or will it be added to the referenced one above?

Answer Mold Assessment and/or Industrial Hygiene will be a separate solicitation independent from the Disaster Remediation Contract.

economy, or government. Any occurrence that does not meet this definition shall be deemed "disaster" remediation services.

3. QUESTIONS/ANSWERS

1.	The main question is will this bid request be for normal day to day emergency service / mitigation such as a pipe break at a Lee County property or is it for disaster situations due to a major tropical storm or hurricane? The reason for the question is due to the tremendous difference in logistics between the two types of losses. During a regular emergency service during normal business hours or even after hours we handle this 100% in house with our own staff, equipment but with hurricane damage losses it is necessary to bring in additional labor, equipment, vehicles as well as provide per diem for the workers in order to service our customers as efficiently and effectively as possible.
Answer	Lee County has provided further clarification on Addendum 3. For day-to-day emergencies, for purposes of this solicitation, Lee County shall define those instances as "disaster". For purposes of this solicitation, major storms, hurricanes, etc. shall be defined as "catastrophic". Please see attached Addendum 3- Revised Bid Proposal Form as well as article revision for further clarification.

BIDDER/PROPOSER IS ADVISED, YOU ARE REQUIRED TO ACKNOWLEDGE RECEIPT OF THIS ADDENDUM WHEN SUBMITTING A BID/PROPOSAL. FAILURE TO COMPLY WITH THIS REQUIREMENT MAY RESULT IN THE BIDDER/PROPOSER BEING CONSIDERED NON-RESPONSIVE.

Category 3 Water Grossly unsanitary water containing pathogenic agents, arising from sewage or other contaminated water sources and having likelihood of causing discomfort or sickness if consumed or exposed to humans. Black water includes sewage and other contaminated water sources entering or affecting the indoor environment. Toilet backflow that originated beyond trap are considered black water contamination, regardless of visible content or color. Category 3 water includes, but is not limited to:
 - Sewage/rainwater mixed
 - Rising water from rivers or streams, such water sources carry silt and organic matter into structures creating black water conditions
- 2.4.5. Water Damage Clean up and mold prevention: The table below presents strategies to respond to water damage within 24-48 hours. These guidelines help avoid the need for remediation of mold growth by taking quick action before growth starts. Depending on the size of the area involved and resources available, the County may need professional assistance to dry an area quickly and thoroughly.

Water-Damaged Material	Actions
	For non-valuable items, discard books and papers.
Books and papers	Photocopy valuable/important items, discard originals.
	Freeze (in frost-free freezer or meat locker) or freeze-dry.
	Remove water with water extraction vacuum.
Carpet and backing - dry within 24-48 hours	Reduce ambient humidity levels with dehumidifier.
nour s	Accelerate drying process with fans.
Ceiling tiles	Discard
Ceiling Grid	To remain. Shall be cleaned. Repair any damage caused by removal of tiles.
Cellulose insulation	Discard
	Remove water with water extraction vacuum.
Concrete or cinder block surfaces	Accelerate drying process with dehumidifiers, fans, and/or heaters.
Fiberglass insulation	Discard
Hard surface, porous flooring (Linoleum,	Vacuum or damp wipe with water and mild detergent and allow drying; scrubbing if necessary.
ceramic tile, vinyl)	Check to make sure under flooring is dry; dry under flooring if necessary.
Non-porous, hard surfaces	Vacuum or damp wipe with water and mild detergent and allow
(Plastics, metals)	drying; scrubbing if necessary.
Upholstered furniture	Remove water with water extraction vacuum.

Water Damage - Cleanup and Mold Prevention

	Accelerate drying process with dehumidifiers, fans, and/or heaters.
	May be difficult to completely dry within 48 hours. If the piece is valuable, you may wish to consult a restoration/water damage professional who specializes in furniture.
Wallboard (Drywall and gypsum board)	May be dried in place if there is no obvious swelling and the seams are intact. If not, remove, and discard Ventilate the wall cavity, if possible.
Window drapes	Follow laundering or cleaning instructions recommended by the manufacturer.
Wood surfaces	Remove moisture immediately and use dehumidifiers, gentle heat, and fans for drying. (Use caution when applying heat to hardwood floors.) Treated or finished wood surfaces may be cleaned with mild detergent and clean water and allowed to dry. Wet paneling should be pried away from wall for drying.

2.5. Restoration/Remediation Criteria

- 2.5.1. Excess Water Removal Excess water removal is essential as the beginning point of restoration procedures. Removal of excess water may be achieved by physical means, such as mopping or soaking up excess moisture from hard surfaces or furnishings. However, water removal usually involves the use of more sophisticated techniques and equipment such as pumps, or specifically designed commercial wet vacuuming equipment.
- 2.5.2. Evaporation Once excess water is removed, remaining water must be changed from a liquid to a vapor by promoting evaporation. Normally, this is accomplished efficiently with specialized air-moving equipment.
- 2.5.3. Dehumidification Once moisture is evaporated from structural materials and contents into the air, the moisture must be removed from the air through dehumidification, or it must be externally exhausted. Failure to dehumidify may result in substantial secondary damage and present a significant health hazard.
- 2.5.4. Temperature Control Both evaporation and dehumidification are greatly enhanced by controlling the temperature in a confined environment. Additionally, microorganisms' growth is temperature related. Thus, temperature modification and control is an important basis principle for safe and effective drying.
- 2.5.5. Monitoring The damaged structure must be monitored starting with the initial assessment and evaluation, and continuing throughout the restoration process. Monitoring procedures may include, but are not limited to the following:
 - 2.5.5.1. Temperature and humidity readings
 - 2.5.5.2. Updating drying progress status
 - 2.5.5.3. Checking the moisture content of structural wood and other materials with a moisture meter
- 2.5.6. Inspection Following the removal of excess water, a detailed inspection must be conducted that considers the extent of water migration, the types of quantities of affected material and the degree of apparent damage. The information obtained may be used to analyze the extent of damage and to determine the job scope. Professional testing equipment and principals of psychometry must be used to formulate a plan to dry and restore, or replace both structural materials and contents. A comprehensive inspection may include, but not necessarily be limited to:
 - 2.5.6.1. Identifying and evaluating health and safety hazards
 - 2.5.6.2. Determining the source of water

- 2.5.6.3. Determining the need to protect floor covering materials and contents
- 2.5.6.4. Determining the extent of moisture intrusion
- 2.5.6.5. Determining the job scope
- 2.5.6.6. Evaluating flooring materials
- 2.5.6.7. Evaluating inventories and/or contents items
- 2.5.6.8. Evaluating the HVAC system if affected
- 2.5.6.9. Assess other structural materials (walls, ceilings, etc.)
- 2.5.6.10. Documenting preexisting conditions not related to the current loss (wear, urine contamination, delamination, etc.)
- 2.5.6.11. Establishing drying goals
- 2.5.7. Floor covering evaluation Vendor shall decide as to whether floor covering materials (e.g. carpet, cushion, vinyl, wood, laminates) are salvageable. Determination may include, but not limited to:
 - 2.5.7.1. Construction integrity
 - 2.5.7.2. Porosity and potential health effects from contaminants
 - 2.5.7.3. Disposition of floor coverings and the ability to salvage them will be determined to the appended Drying Standards
- 2.5.8. Structural Materials –Throughout the restoration process, Vendor shall direct effort toward anticipating secondary damage and attending to other structural components that may require drying, or demolition and replacement. This is especially important if water remains in contact with building materials longer than 24-hours, such as water on flooring in contact with gypsum board. These components may include, but are not limited to:
 - 2.5.8.1. Ceilings
 - 2.5.8.2. Walls
 - 2.5.8.3. Built-in furnishings and fixtures
 - 2.5.8.4. Insulation
 - 2.5.8.5. Structural Wood
- 2.5.9. Occupant Evacuation For areas with extensive water damage, Vendor shall determine if occupants need to be evacuated from the damaged area, and if so, estimate the duration of time. Factors used to make this determination may include, but are not limited to:
 - 2.5.9.1. Type of contamination (e.g., Categories 1, 2 or 3 Water)
 - 2.5.9.2. Obvious indications of high levels of microbiological or chemical contamination
 - 2.5.9.3. Presence of occupants who are immunocompromised or have mold allergies, asthma or other applicable medical conditions.
- 2.5.10. Technician Training Technicians performing Category 2 water (gray water) and category 3 water (black water) damage restoration must be trained in risks of exposure and procedure for sale cleanup of these materials.
- 2.5.11. Personal Protection Persons working in or around Category 3 water during stage of decontamination, cleaning and biocide application must be equipped with Personal Protective Equipment (PPE) including but not limited to:
 - 2.5.11.1. Rubber gloves 2.5.11.2. Eye protection 2.5.11.3. Protective suit 2.5.11.4. Rubber boots

An Evaluation must be made to determine the necessity for respiratory protection. In the case of overhead hazards or contamination, hard hats must also be worn.

2.6. Criteria for Determining when Building Materials are Dry

- 2.6.1. The ambient conditions must be stabilized and be able to be held at normal room conditions.
- 2.6.2. The building materials must be returned to their equilibrium moisture content to prevent the active growth of fungal organisms.
- 2.6.3. The building materials must be returned to their pre-loss moisture state.
- 2.6.4. Drying services shall be considered sufficient when the following three conditions have been achieved:
 - 2.6.4.1. The interior ambient conditions are at or better than normal room conditions (50% RH @ 70°F)
 - 2.6.4.2. The moisture in the building materials themselves will not support the active growth of mold and mildew
 - 2.6.4.3. The building materials and contents will finish returning to equilibrium with normal room conditions by themselves without further damage to them
- 2.6.5. Drywall Drying services for drywall will be provided by an outside contractor, if Vendor cannot replace the drywall within 48 hours. If drying procedures are not initiated within 48 hours of the initial water loss or dried within 72 hours, all wet drywalls shall be replaced.  - 2.6.5.1. The moisture content of the drywall is decreasing
 - 2.6.5.2. All affected drywall is within 10% of its normal moisture content as determined by actual measurement in a control point elsewhere in the same building. (Example: Taking several readings in unaffected areas of drywall showed that the MC that should be expected in the building is 14%. Therefore, the maximum reading at e end of the job should be no more than 24%)
 - 2.6.5.3. The differential of MC in wood from the top $\frac{1}{4}$ is not more than 1%
 - 2.6.5.4. The building environment is stabilized and the existing HVAC system is capable of maintaining normal room conditions

economy, or government. Any occurrence that does not meet this definition shall be deemed "disaster" remediation services.

3. QUESTIONS/ANSWERS

_ .	Ine main question is will this bid request be for normal day to day emergency service / mitigation such as a pipe break at a Lee County property or is it for disaster situations due to a major tropical storm or hurricane? The reason for the question is due to the tremendous difference in logistics between the two types of losses. During a regular emergency service during normal business hours or even after hours we handle this 100% in house with our own staff, equipment but with hurricane damage losses it is necessary to bring in additional labor, equipment, vehicles as well as provide per diem for the workers in order to service our customers as efficiently and effectively as
Answer	Lee County has provided further clarification on Addendum 3. For day-to-day emergencies, for purposes of this solicitation, Lee County shall define those instances as "disaster". For purposes of this solicitation, major storms, hurricanes, etc. shall be defined as "catastrophic". Please see attached Addendum 3- Revised Bid Proposal Form as well as article revision for further clarification.

Form 1 – Solicitation Form, Page 2

3 <u>Business Relationship Disclosure Requirement:</u> Sections 112.313(3) and 112.313(7), FL §, prohibit certain business relationships on the part of public officers and employees, their spouses, and their children. See Part III, Chapter 112, FL §, and/or the brochure entitled "A Guide to the Sunshine Amendment and Code of Ethics for Public Officers, Candidates and Employees" for more details on these prohibitions. However, Section 112.313(12), FL § (1983), provides certain limited exemptions to the above-referenced prohibitions, including one where the business is awarded under a system of sealed, competitive bidding; the public official has exerted no influence on bid negotiations or specifications; and where disclosure is made, prior to or at the time of the submission of the bid, of the official's or his spouse's or child's interest and the nature of the intended business. The Commission on Ethics has promulgated this form for such disclosure, if and when applicable to a public officer or employee.

If this <u>disclosure is applicable request form</u> "INTEREST IN COMPETITIVE BID FOR PUBLIC BUSINESS" (Required by 112.313(12)(b), FL § (1983)) to be completed and <u>returned with solicitation response</u>. It is the bidder/proposer's responsibility to disclose this relationship, failure to do so could result in being declared non-responsive.
